

Queries in FASTA format

The FASTA format is a general sequence format composed of a header starting with '>' followed by the sequence identifier. The next line then contains the sequence. More detailed information is available [here](#).

E-RNAi only allows sequences containing A, C, G, T nucleotides. Sequences can contain newlines.

Example

```
>TargetSeq_1
ACGACGCGCAGCAGGTGGTTAAGATA
TCGATGACAGACTACAGACTAAGATAA
GGCCGGAAGGTTTATTTCGACGATAGCA
AGTAGCATCGACAGCATCAGATAGC
>TargetSeq_2
CAGCGACGACGAACGCATGTGCGACTG
AATAGTCAGATAGAGAATTCGGATGGA
TTAGTAGATAGACGACAGA
```
